

Scientific Observational Study LOVITT Haarkonzept Hair Tonic
 From August 2016 until December 2017

Over a period from August 2016 until December 2017
 we conducted a scientific observational study of LOVITT hair product

6 women with light androgenetic alopecia used the treatment daily, for a period of one year.
 The hair thickness and density were measured with a video dermatoscope, both before and one year
 All 6 of the women tolerated the treatment and found it agreeable.
 5 of the 6 women showed an improvement in hair density and thickness.
 The hair tonic is produced exclusively with natural ingredients.

	Thickness in μm		Density of each hair cm^2			
	before	after	before	after
